STACK

- **Backend**
Node.js · NestJS · Express · TypeScript · Python · REST APIs · microservices
- **Data**
PostgreSQL · MongoDB · Redis · SQLite
- **Cloud & DevOps**
Docker · Linux · GCP / Cloud Run · Git · CI/CD
- **AI / Agents**
LLMs (OpenAI/Anthropic) · RAG · MCP · OCR
- **Security**
JWT · OAuth2 · HMAC · AES-256-GCM
- **Frontend**
React · Next.js · PWA
- **Testing**
Jest · unit testing · WebSockets / real-time

EDUCATION

Technical Degree in Software Development

SENA · formal qualification

Self-taught background

10+ years of hands-on production experience

Philosophy (in progress)

Universidad de Antioquia · grounding in logic and reasoning

LANGUAGES

Spanish

Native

English

Strong technical reading and writing; conversational at a working level (B1).

Steven Vallejo Ortiz

Software Engineer · Backend / Cloud / AI Automation

Medellín, Colombia · Remote · 10+ years of experience

PROFILE

Software Engineer with 10+ years of experience building backend systems, SaaS platforms, automation workflows and cloud infrastructure. Strong background in Node.js/NestJS, PostgreSQL, Docker, Linux, GCP and AI-powered process automation. Focused on microservices, REST APIs and agile (Scrum) delivery. Available full-time, remote or relocation to Spain.

EXPERIENCE

Humanizar Systems · Founder / Lead Developer · own 2022 — Present project

Built a multi-tenant SaaS ecosystem (e-commerce, POS with DIAN electronic invoicing, and a credit module) using NestJS microservices, PostgreSQL and Docker, so Colombian SMBs could sell, invoice legally and manage credit from a single platform. Inter-service communication via pub/sub and HMAC-signed webhooks; JWT/OAuth2 auth; Git and CI/CD deployment. In production with real clients.

Finca Directa S.A.S · CTO / Head of Systems · services 2021 — Present contract

Built an RPA administrative-automation system (invoice OCR, bank statement retrieval, email classification and CRM synchronization) with Node.js and Python on Linux, with idempotency and human-in-the-loop validation, to remove repetitive manual work and reduce data-entry errors.

Indie Levels Studio · Backend Developer · fixed-term 2021 — Present contract

Developed and maintained backend REST services and APIs (Node.js/TypeScript) with PostgreSQL for the products of a game studio with users across several countries, using Git version control and testing to keep releases stable.

Critertec · Systems Administrator · fixed-term contract 2024 — 2026

Operated and secured the production infrastructure (Linux, Docker, CI/CD) running the agency's digital solutions, keeping services continuously available. Contract ended in 2026.

Soy Digital · INDOTEL · Frontend Developer · government project 2023 (Dominican Republic, via Critertec)

Built the frontend with offline support and automatic synchronization for a national digital-literacy platform of the Dominican government, using React/Next.js and PWA, so registration worked even without a stable connection in the field.

Earlier roles (2016–2021): Full Stack at ZENIT, INS, Kambban and IQpixels; freelance work in web, infrastructure and game development since 2014.

SELECTED PROJECTS

Ágora — AI agent platform · agora.elenxos.com

Designed and implemented the full architecture as a poly-repo of separate services (Next.js frontend, Express/NestJS backend on Cloud Run, a socket.io hub and Docker workers) to isolate concerns and deploy each part independently. Design decisions: a tool registry so agents carry out real actions (not just text), bring-your-own-key, contracts validated with Zod, secrets encrypted with AES-256-GCM, and a custom MCP server. Deployed and running.

ST — executable formal-logic language · npm package

A language published on npm with its own CDCL SAT solver, type theory and more than 6,000 automated tests (Jest). Bridges formal logic and software engineering; it is the logical core of Ágora.
